

The FluidSecure Pulsar Selection

FluidSecure
Simply Smart & Affordable

Pulsers Selection

A Pulsar (pulsar with an “e”) is needed for a fuel management system to count quantity of fluid dispensed. The Pulsar connects to the Pump/Dispenser – one per hose. There are three (3) types of Pulsars available from FluidSecure – most dispenser/pump manufacturer supplied pulsers can be used too.

Mechanical Pulsar to fit Fill-Rite® 800/900 Series Meters

This works with the small pumps/meters manufactured by Fill-Rite. It connects on to the register of the meter. This is very accurate.

Flow Pulsar – installs inline on the hose reel

This attaches to output on pump and the hose threads into the other side. Minimum flow rate of 8 gallons (22 liters) per minute and maximum flow rate of 30 gallons (113 liters) per minute.

This should only be used if the pump does not have a meter/register

Mechanical 10:1 Pulsar

This is a general pulsar used for older mechanical dispensers.

NOTE: For all Digital/Electronic dispensers a pulsar must be purchased directly from the manufacturer of the dispenser/pump
